

Monitoring keys

KM ensures the traceability of the usage and return of each key.

Management and Security

The Key Manager line consists of two types of key cabinets: KM and KMS.

These systems allow you to:

- Secure keys.
- Monitor the usage of a key.
- Identify the user of a key.
- Make key users accountable.
- Manage the mandatory return of keys.
- Generate a detailed log of every key usage.
- Trigger alarms.

Modular, can manage up to 96 keys (using a module of 32 sockets).

Installation of a card reader **compatible with your existing access card system**.

The benefits

- Compatibility with all access control systems (patented feature).
- Simple configuration.

KMS

Locking keys

KMS offers a superior level of security through a controlled distribution system determined by the user's rights.

The benefits

- **Modular**, can manage up to 88 keys per cabinet (using a module of 32 sockets).

- **Integrated** card reader.

- Personal identification codes can be entered through the cabinet's **keypad**.

- Every cabinet communicates with the central system through LAN/WAN.

- **Interactive touch screen** for accessing various functions and information of the cabinet.

- **Key rings** can be used as identity cards.

- Reading of key rings **by RFID** (registered patent): no wearing out nor risk of error when used on other access readers.

- Integration of biometric **technology** and identity cards with memory (13.56 MHz).

- **Reinforced security** through multiple modalities of access to keys.

According to your needs, KM and KMS can be attached and operated by the same software with a user-friendly interface.

Cabinets can be attached allowing a large scale customization.

non contractual photographs

Independent operation or integrated to our electronic security system.

Alarm triggers when power supply fails, the door is open too long, the return deadline has expired, an identity card is invalid, a key is missing, etc.

ALCEA is the only provider that develops a system combining access control, intrusion surveillance and key management.

KM and **KMS** are available in different configurations according to your different needs.

Software for single cabinet:

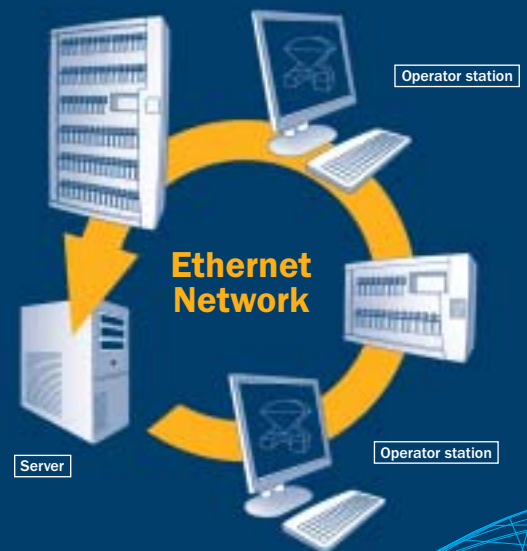

A prompt connection is crucial to transfer user rights and to view past usage. A continuous connection allows real-time monitoring.

Software for multiple cabinets:

This software can manage an entire set of Key Manager cabinets. Natural peripheral to ALWIN system, the software can integrate access control, intrusion detection and facilities management.

KMS in autonomous mode:

With its interactive touch screen, the cabinet can be programmed and configured on site.

Features	KM	KMS
Secure key rings	•	•
Auto-protection	•	•
Mechanical unlocking through emergency keys	•	•
Locating pre-defined keys	•	•
Locating used keys		•
Locked keys		•
Interactive touch screen		•
